

Perfect — this actually confirms your team is thinking in the right architectural direction (plugin-based dashboards).

What they need now from you is a clear, authoritative “Dashboard Display Contract” they can lock into the brand kit and treat as the single UX source of truth.

Below is exactly what you should send them (and also use to update the brand kit).

FLYN AI — Dashboard Display Blueprint

(Authoritative Reference for All Dashboards & Plugins)

Principle:

Every dashboard in FLYN AI follows the same UX hierarchy, regardless of module (CRM, HR, Church, Freelance, Telephony, etc.).

Only data + actions change, not structure.

1 Universal Dashboard Layout (MANDATORY)

Every dashboard must contain these 6 layers, in this order:

1. Header KPI Strip (Top)

Purpose: Instant system awareness (5–10 seconds scan)

Rules

- 3–6 KPIs max
- Always real data (or demo in Free)
- Clickable → deep view

Examples

- CRM: Leads, Deals Won, Pipeline Value, Response Time
- HR: Employees, Attendance %, Payroll Status
- Church: Members, Attendance, Donations
- Freelance: Active Clients, Revenue, Tasks Due
- Telephony: Active Calls, Missed Calls, Avg Call Duration

2. Primary Action Bar

Purpose: What the user can DO right now

Rules

- 1 primary action (solid)
- 1–2 secondary actions (outline)
- All actions always grouped visually

Examples

- “Create Deal”
- “Send Broadcast”
- “Start Call”

- “Run Automation”
- “Ask AI”

3. Core Operational Table (MAIN FOCUS)

Purpose: This is the heart of the dashboard

Rules

- Always sortable
- Always filterable
- Bulk actions enabled
- Saved views supported

Examples

- CRM → Deals / Contacts table
- HR → Employee list
- Church → Member list
- Freelance → Projects / Clients
- Inbox → Conversations

 *This table is the product, not the charts.*

4. Contextual Analytics (Side or Below Table)

Purpose: Explain performance, not decorate UI

Rules

- 3–5 charts max
- Contextual to table selection
- Time range selector mandatory

Examples

- Conversion funnel
- Response SLA
- Attendance trend
- Revenue over time
- Call volume heatmap

5. AI Insight Panel (Collapsible)

Purpose: Differentiation & intelligence

Rules

- Never intrusive
- Actionable suggestions only
- Clearly labeled as AI

Examples

- “You are losing deals at proposal stage”
- “Peak call hours are 3–6 PM”
- “Consider automating follow-ups”

6. Activity & System Feed (Bottom / Right)

Purpose: Trust & auditability

Rules

- Chronological
- Human-readable
- Linked to entities

Examples

- “Deal moved to Won”
- “Automation triggered”
- “AI Agent responded”

2 Dashboard Types & What They Display

CRM Dashboard

Primary Table: Deals / Contacts

KPIs: Pipeline value, Win rate, Avg response time

AI: Deal risk, next-best-action

Actions: Add deal, send message, assign agent

Unified Inbox Dashboard

Primary Table: Conversations (All Channels)

KPIs: Open chats, SLA breaches, CSAT

AI: Reply suggestions, sentiment

Actions: Reply, assign, escalate

Telephony Dashboard

Primary Table: Call logs

KPIs: Active calls, missed calls, avg duration

AI: Call summaries, quality scoring

Actions: Dial, assign queue, listen recording

HR Dashboard

Primary Table: Employees

KPIs: Attendance %, payroll status

AI: Attrition risk, performance trends

Actions: Add employee, approve leave

Church / Community Dashboard

Primary Table: Members

KPIs: Attendance, donations

AI: Engagement insights

Actions: Broadcast, event creation

Freelance / Agency Dashboard

Primary Table: Clients / Projects

KPIs: Revenue, overdue tasks

AI: Billing risk, workload balance

Actions: Invoice, assign task

③ Plugin Rule (Critical)

Any new module added must only define:

KPIs

Primary table

Actions

AI insights

It automatically inherits:

Layout

Filters

Permissions

Analytics shell

AI panel behavior

This keeps FLYN coherent at scale.

④ Role-Based Visibility (Applied to All Dashboards)

Founder / Admin

Sees everything

Financial KPIs

System health

AI governance

Manager / Ops

Team KPIs

Performance analytics

Limited financials

Agent / Staff

Task-level view

Assigned records only

No global analytics

5 Brand Kit Update

“The brand kit should now include:

Dashboard layout structure

KPI strip styles

Table design rules

Chart usage guidelines

AI panel behavior

Empty / demo / capped states This will be the UX reference for all dashboards.”

6 What You Should Reply to Them (Copy-Paste)

Yes — every dashboard should follow a universal structure: KPI strip → action bar → primary table → contextual analytics → AI insights → activity feed. Only the data and actions change per module. Please update the brand kit to include this dashboard hierarchy and treat it as the single UX reference for all current and future plugins.
