

FLYN AI Advanced CRM Feature Architecture

1. Unified Customer Intelligence

- Unified identity across WhatsApp, Telegram, Email, Website, Calls
- Automatic profile merging
- Behavioral tracking
- AI-driven lead scoring and churn prediction

2. AI Operating CRM

- AI auto-updates CRM records
- AI generates notes and next actions
- AI creates deals and pipeline stages

3. Event-Driven CRM Core

- Every action is an event (message, visit, form submission)
- Enables real-time automation and integrations

4. Smart Pipeline Engine

- AI-generated pipelines
- Auto stage movement
- Revenue forecasting
- Deal probability scoring

5. Behavioral Tracking Engine

- Tracks page visits, clicks, engagement
- Stores events for analytics and automation

6. Omnichannel Orchestration

- Intelligent message routing across channels

- Fallback logic (WhatsApp → Telegram → Email → SMS)

7. Real-Time Decision Engine

- AI-driven actions based on user behavior
- Auto engagement, escalation, notifications

8. Team Workflow Engine

- SLA tracking
- Skill-based routing
- Task assignment and collaboration

9. Predictive Analytics

- Revenue prediction
- Customer lifetime value
- Campaign performance insights

10. Knowledge Graph

- Relationship mapping between contacts and interactions
- Network intelligence and recommendations

11. Developer Platform

- REST APIs, Webhooks, SDK tokens
- Full developer integration layer

12. Automation Builder

- Multi-channel workflows
- AI-assisted automation creation

13. AI Memory System

- Persistent customer memory
- Stores behavior, preferences, and history

14. Enterprise Security

- Role-based access control
- Data encryption
- Audit logging

15. Global Support

- Multi-region infrastructure
- Language detection and localization

16. Revenue Engine

- Payment and subscription tracking
- AI upsell and monetization insights

Implementation Roadmap

Phase 1: Core CRM + Messaging

Phase 2: AI Integration

Phase 3: Automation Engine

Phase 4: Advanced Analytics & Knowledge Graph
